

MEDIA ALERT

METERS AND MORE to speak at European Utility Week 2018

At Booth A.h22 Visit the Meters and More stand to learn much more about the Association and the prototype of the METERS AND MORE smart energy “Gateway”.

VIENNA, AUSTRIA 6 November, 2018 – METERS AND MORE AISBL, the global, non-profit, Association that maintains and promotes the most widely deployed communication protocol for smart metering, will be speaking at the upcoming **European Utility Week (EUW 2018)**, a platform for achieving a fully integrated and interconnected electricity system and market in Europe, taking place **6-8 November**, Vienna, Austria.

Today, digitalisation and new technologies are booming in the energy sector. This new scenario needs a platform which supports system interoperability, worldwide feature accessibility and the adoption of open technologies. Meters and More communication protocol for smart metering is an important point of reference in smart grid applications.

Meters and More is in fact a no-profit association based in Brussels, started in 2010 with the goal to promote the open Meters and More protocol for smart metering, assuring product interoperability, a neutral certification process, standardization at European and international level and the continuous integration of technological evolutions.

On the horizon, the Meters and More Association sees the development of an extension of its technology for complementary value-added services based on the same principles of openness, interoperability, efficiency, robustness and secure communications: a big focus on services beyond metering.

The Meters and More smart metering information and telecommunication protocol has been extensively rolled out in Europe and in Latin America where 50 million of Meters and More smart meters have already been installed. The success of these implementations brings many advantages for customers through the new smart meters that use the Meters and More technology.

To understand the benefits of this technology for electricity consumers across Europe, Meters and More invites you to visit them at their exhibition booth (Ah22) and talk to one of the experts that are available to walk you through the Meters and More technology.

Event Details:

Summit Session:

Pilar Nieto Hernández - Head of Network Technology, Enel; Meters and More, Chairperson of Board of Directors.

“Meters and More. Beyond the meters”

Enabling Technologies 07 nov h 14:30 -14:50

Hub Session:

Alessandro Bertani - Smart Grid Director CESI, Meters and More Director.

“Meters and More. Solution enabling Customer Awareness”

Smart Metering 07 nov. h 16:40 -17:00
